### Software Engineer in Test (SEiT)

**Tribe:**

Gaming

**Product:**

It's a weird one currently, I work with Vegas, Casino and Poker, as well as Gaming Platform Engineering, you could say all of the products..

**Technologies/tools used:**

PHP Codeception, Selenium Grid, WebDriver, Robo, Docker, Jenkins, Github, Grafana, AWS

**Briefly describe what it's like to work in your tribe on a daily basis?**

I suppose the most challenging bit is working across all of the products at the same time, since we're working on a unified testing framework, we need to collaborate with everyone. Working around other squads' deadlines and priorities. Fun bits are the ones that prove my work is valuable to the company, from saving us from potential risks and identifying issues, before the customer does, to making other peoples' development and testing more robust and easy. It's always exciting to see someone ask about browser automation as to some it seems like magic!

**What has been your proudest moment at Sky Betting and Gaming?**

There are a few really, handing over the test packs to the squads, and actually seeing them appreciate the work I've done and look after it is one. Most recently though, was proving the company, that we don't need to use an expensive third party solution for one of the automation tasks, as we had the skills and technology in-house. Which saved the company a bunch of money and allowed us to start the process of creating a new squad for that.

**You're favourite three things about working for Sky Betting and Gaming:**

1. Colleagues: and the working environment, this doesn't really need an explanation, I think majority of people feel the warmth of the place and constantly repeat "Best company I've worked for"
2. L&D Time and Tech Ninja: The company invests in you, they want to see you progress in your career and allow you all of the opportunities to achieve that.
3. Work appreciation: A lot of what I do gets the recognition I strive for, it's amazing to see people use my work, ask questions about it and actually care for it, even though we're a big company, you don't feel like "a small cog" in a big machine.

**An interesting fact that no one knows about you:**

I'm more sensitive than I care to admit, or to show others.
